

ReVireo®

Johns Hopkins University Modular Data Center

Overview

Johns Hopkins University, in partnership with Innovatus Construction Management, developed and constructed a modular data center building on the Johns Hopkins University campus in Laurel, Maryland. ReVireo was engaged to support the commissioning requirements needed. ReVireo prepared a comprehensive Load Bank Commissioning Plan to verify the performance, reliability, and functionality of the generator system.

The plan incorporated an integrated systems test to confirm operational readiness and ensure alignment with project requirements. This process established a clear roadmap for dependable system performance—safeguarding critical university infrastructure and supporting long-term operational efficiency.
