

ReVireo

The Neighborhoods of Cedar Creek

Overview

Located just off the Southern New Jersey coastline, this new single-family home community was constructed in the wooded area surrounding the new Cedar Creek High School in Egg Harbor City. All of the homes in this community pursued ENERGY STAR certification.

Along with ENERGY STAR compliance consulting and inspections, ReVireo also provided technical training and rebate processing as part of a fully customized package of services. Additionally, ReVireo provided marketing services including competitive messaging, content generation and video production services to create a TV commercial promoting the community's ENERGY STAR certification, which is also featured on the community's website.

"ReVireo's team has deep technical expertise and their personal interest in my project has helped me understand and perform the work of an energy efficient builder. They make it easy for me to manage the bureaucracy of the Federal and State ENERGY STAR programs. They actually feel like a partner. If you are serious about the ENERGY STAR program and building the most energy efficient homes in your marketplace, you could do no better than engaging the ReVireo team in your effort."
